Figure 1 consists of a 3x3 grid of scatter plots. Each plot has 'Number of children' on the x-axis and 'Number of parents' on the y-axis. The top row shows a positive correlation, the middle row shows a negative correlation, and the bottom row shows no correlation. Each plot contains a different set of data points.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of transformed explants was counted. The results are shown as the mean $\pm$ SD of three independent experiments. The data were analyzed by the Student's *t*-test. The difference between the control and the treatment was significant at $p < 0.05$.
