2021

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10<sup>6</sup> cells/ml (a), 10<sup>7</sup> cells/ml (b), 10<sup>8</sup> cells/ml (c), 10<sup>9</sup> cells/ml (d), 10<sup>10</sup> cells/ml (e), and 10<sup>11</sup> cells/ml (f). The concentration of the *Agrobacterium* suspension was 10<sup>6</sup> cells/ml (a), 10<sup>7</sup> cells/ml (b), 10<sup>8</sup> cells/ml (c), 10<sup>9</sup> cells/ml (d), 10<sup>10</sup> cells/ml (e), and 10<sup>11</sup> cells/ml (f). The concentration of the *Agrobacterium* suspension was 10<sup>6</sup> cells/ml (a), 10<sup>7</sup> cells/ml (b), 10<sup>8</sup> cells/ml (c), 10<sup>9</sup> cells/ml (d), 10<sup>10</sup> cells/ml (e), and 10<sup>11</sup> cells/ml (f).

[illegible]

**Figure 1.** The effect of the number of trials ( $n$ ) on the probability of observing at least one success ( $p \geq 0.05$ ). The figure shows two sets of curves: one set for  $\alpha = 0.05$  (left column) and one set for  $\alpha = 0.01$  (right column). Each set contains three curves corresponding to different values of  $\beta$ :  $\beta = 0.05$  (top curve),  $\beta = 0.1$  (middle curve), and  $\beta = 0.2$  (bottom curve). The x-axis represents the number of trials ( $n$ ) from 1 to 10, and the y-axis represents the probability of observing at least one success from 0 to 1.0. The curves show that the probability increases with the number of trials and decreases as  $\beta$  increases.

[illegible][illegible][illegible]

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The transformation efficiency was determined as the number of transformed explants per explant. The data are the mean  $\pm$  SD of three independent experiments. \* indicates a significant difference ( $p < 0.05$ ) between the control and the treatment groups.

Case	Age	Sex	Duration of disease	Initial symptoms	Course	Outcome
1	25	M	10 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
2	35	F	5 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
3	45	M	15 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
4	55	F	20 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
5	65	M	25 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
6	75	F	30 years	Weight loss, fatigue, weakness	Progressive weight loss, weakness, fatigue	Death
