[illegible]

Figure 1 consists of 12 panels arranged in a 4x3 grid. The first two columns show the effect of diazepam alone (100 mg/kg) and the third column shows the effect of diazepam plus a 10-fold excess of diazepam (1000 mg/kg). The rows represent different time points: 0, 1, 2, and 3 hours. The y-axis represents the percentage of [3H]diazepam released, ranging from 0 to 100. The x-axis represents time in hours. The release increases over time, and the addition of a 10-fold excess of diazepam significantly reduces the release at all time points.
