[illegible]

Abstract

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (○), 10⁷ cells/ml (□), 10⁸ cells/ml (△), and 10⁹ cells/ml (◇). The error bars represent the standard deviation of three independent experiments.

(continued)

[illegible]

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 1024. The *Agrobacterium* strain 1024 was cultured in the YEA medium for 24 h. The cell concentration was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant protoplast suspension at the ratio of 1:1. The mixture was incubated for 24 h at 25°C. The protoplasts were then cultured in the YEA medium for 24 h. The transformation efficiency was determined by the number of transformants per protoplast. The results are shown as the mean ± SD of three independent experiments. The number of transformants per protoplast was significantly different from the control (p < 0.05) by the Student's t-test.
