Figure 1 consists of seven sub-graphs labeled (a) through (g), each plotting the percentage of correct responses (Y-axis, 0 to 100) against time in seconds (X-axis, 0 to 10). The graphs show the performance of subjects under different conditions, with asterisks indicating significant differences from the control group.

- (a) Control group: Shows a steady increase in correct responses from approximately 20% at 0 seconds to 80% at 10 seconds.
- (b) 100% feedback: Shows a rapid increase in correct responses, reaching approximately 90% by 2 seconds and remaining high.
- (c) 50% feedback: Shows a rapid increase in correct responses, reaching approximately 85% by 2 seconds and remaining high.
- (d) 25% feedback: Shows a rapid increase in correct responses, reaching approximately 80% by 2 seconds and remaining high.
- (e) 10% feedback: Shows a rapid increase in correct responses, reaching approximately 75% by 2 seconds and remaining high.
- (f) 5% feedback: Shows a rapid increase in correct responses, reaching approximately 70% by 2 seconds and remaining high.
- (g) 1% feedback: Shows a rapid increase in correct responses, reaching approximately 65% by 2 seconds and remaining high.

Figure 1 illustrates the experimental setup. A subject is seated at a table, looking at a video screen. A camera is positioned above the screen, and a light source is positioned to the left. A scale bar is shown below the screen. The diagram is labeled with 'Subject', 'Video Screen', 'Camera', 'Light Source', and 'Scale Bar'.

Figure 1 is a schematic representation of the experimental design. It shows a sequence of events: Pretest, Training, and Transfer. Each event has a corresponding label in a circle. Arrows indicate the flow from Pretest to Training to Transfer. A legend indicates that Pretest and Posttest are represented by circles, and Training and Transfer are represented by rectangles.
