Figure 1. The four stages of the proposed model. (a) The initial stage, (b) the first stage, (c) the second stage, and (d) the third stage.

Figure 1 consists of four line graphs arranged in a 2x2 grid. Each graph plots the percentage of correct responses (y-axis, 0 to 100) against four conditions (x-axis: Control, MCI, AD, DLB). The four groups are represented by different symbols: Control (open circles), MCI (filled circles), AD (open squares), and DLB (filled squares). In all graphs, the Control group maintains high performance (80-90%). The MCI group shows a sharp decline in the MCI condition. The AD group shows a sharp decline in the AD condition. The DLB group shows a sharp decline in the DLB condition.

Group	Control	MCI	AD	DLB
Control	85	85	85	85
MCI	85	40	85	85
AD	85	85	20	85
DLB	85	85	85	10

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was divided into two subgroups: the control group (CG) and the control group (CG). The EG was divided into two subgroups: the experimental group (EG) and the experimental group (EG). The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was divided into two subgroups: the control group (CG) and the control group (CG). The EG was divided into two subgroups: the experimental group (EG) and the experimental group (EG).
