Figure 6. The effect of the number of iterations on the accuracy of the proposed algorithm. The figure shows two plots side-by-side. The left plot shows the error norm $\|e\|_2$ versus the iteration number n , ranging from 0 to 100. The right plot shows the relative error $\frac{\|e\|_2}{\|x\|_2}$ versus the iteration number n , also ranging from 0 to 100. Both plots show a rapid decrease in error as the number of iterations increases, indicating convergence.

Figure 1 consists of nine scatter plots arranged in a 3x3 grid. The rows represent different levels of the 'Number of children' variable (1, 2, 3) and the columns represent different levels of the 'Number of children in the household' variable (1, 2, 3). Each plot shows a positive correlation between the two variables. The plots are labeled with the following values:

- Row 1 (Number of children = 1): 1, 2, 3
- Row 2 (Number of children = 2): 1, 2, 3
- Row 3 (Number of children = 3): 1, 2, 3
- Column 1 (Number of children in the household = 1): 1, 2, 3
- Column 2 (Number of children in the household = 2): 1, 2, 3
- Column 3 (Number of children in the household = 3): 1, 2, 3

Case	Age	Sex	Duration of disease	Initial symptoms	Course	Outcome

Figure 1 is a schematic representation of the experimental design. It shows two groups of subjects: 'Control' and 'Patients'. Each group has a 'Pre' and 'Post' measurement. The 'Control' group shows a decrease in 'Pain' from Pre to Post. The 'Patients' group shows an increase in 'Pain' from Pre to Post. The 'Pain' scale is represented by a vertical axis with '0' at the bottom and '10' at the top.
