Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium at 28°C for 24 h. The cell concentration was adjusted to 1.0 × 10⁸ cells/ml. The cell suspension was then diluted with distilled water to the indicated concentrations. The cell suspension was then mixed with the plant tissue and the transformation efficiency was determined. The data are the mean ± SD of three independent experiments. The asterisk indicates a significant difference from the control (P < 0.05).

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.
