The figure consists of 11 numbered line drawings arranged in a vertical column, illustrating the stages of bird development:

1. A single egg.
2. A small bird with a large head and a long, pointed beak.
3. A small bird with a large head and a long, pointed beak, similar to stage 2.
4. A small bird with a large head and a long, pointed beak, similar to stage 2.
5. A small bird with a large head and a long, pointed beak, similar to stage 2.
6. A small bird with a large head and a long, pointed beak, similar to stage 2.
7. A small bird with a large head and a long, pointed beak, similar to stage 2.
8. A small bird with a large head and a long, pointed beak, similar to stage 2.
9. A small bird with a large head and a long, pointed beak, similar to stage 2.
10. A small bird with a large head and a long, pointed beak, similar to stage 2.
11. A small bird with a large head and a long, pointed beak, similar to stage 2.

[illegible]

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the intervention group (IG). The CG received a standard care (SC) program, while the IG received a SC program plus a cognitive-behavioral intervention (CBI). The IG was further divided into two subgroups: the IG-1 and the IG-2. The IG-1 received the CBI for 4 weeks, while the IG-2 received the CBI for 8 weeks. The subjects were assessed at baseline (T0), at 4 weeks (T1), and at 8 weeks (T2). The dependent variables were the mean arterial blood pressure (MABP), the heart rate (HR), the systolic blood pressure (SBP), the diastolic blood pressure (DBP), the total cholesterol (TC), the low-density lipoprotein cholesterol (LDL-C), the high-density lipoprotein cholesterol (HDL-C), the triglycerides (TG), the fasting glucose (FG), the fasting insulin (FI), the homeostasis model assessment (HOMA), the quality of life (QoL), and the adherence to the treatment (AT).

[illegible]

The figure consists of seven small diagrams arranged horizontally, illustrating the stages of lesion development:

- A single cell.
- A cluster of two cells.
- A cluster of four cells.
- A cluster of eight cells.
- A cluster of sixteen cells.
- A cluster of thirty-two cells.
- A large, irregular mass representing a tumor.

Figure 1: Northern blot analysis of 18S rRNA and GAPDH mRNA levels in various tissues. The figure shows two rows of blots. The top row is labeled '18S rRNA' and the bottom row is labeled 'GAPDH'. The columns represent different tissues: Liver, Kidney, Heart, Muscle, Adipose, and Brain. Each tissue has two lanes: 'Control' and 'Treated'. The blots show bands of varying intensity, indicating mRNA levels. A legend at the bottom indicates that the top row is 18S rRNA and the bottom row is GAPDH.

Figure 1 consists of 12 subplots, labeled (a) through (l), arranged in a 6x2 grid. Each subplot shows a time course of a specific physiological parameter over a 10-minute period. The x-axis for all plots represents time in minutes, from 0 to 10. The y-axis represents the value of the parameter. Each plot includes a solid line representing the mean value and vertical error bars representing the standard error. The parameters shown are: (a) HR (b/min), (b) BP (mmHg), (c) SV (ml), (d) CO (l/min), (e) SVR (mmHg/l/min), (f) PVR (mmHg/l/min), (g) PPA (mmHg), (h) PVP (mmHg), (i) PVP/PPA, (j) PVP/PPA, (k) PVP/PPA, and (l) PVP/PPA. The plots show various responses to a stimulus, with some parameters showing a significant increase or decrease over time.

[illegible]

Figure 1. The effect of the concentration of the inhibitor on the rate of polymerization of α -methylstyrene in the presence of SnCl_4 at 25°C . The concentration of α -methylstyrene was 0.1 mol l^{-1} , and the concentration of SnCl_4 was 0.001 mol l^{-1} . The concentration of the inhibitor was $10^{-3}\text{ mol l}^{-1}$ (○), $10^{-4}\text{ mol l}^{-1}$ (□), $10^{-5}\text{ mol l}^{-1}$ (△), and $10^{-6}\text{ mol l}^{-1}$ (◇).
