THE FUTURE OF THE FUTURE

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the intervention group (IG). The CG received a standard diet and exercise program, while the IG received a low-carbohydrate, high-fat diet and a high-intensity interval training program. The study duration was 12 weeks. The primary outcome was the change in body composition, and the secondary outcome was the change in metabolic parameters.

Figure 6

2 DAMAGED - RETURNED

1. Introduction

Figure 1 shows a series of 12 line drawings illustrating the development of a chick embryo from fertilization to hatching. The drawings are arranged in two rows of six. The top row shows the embryo at 1, 2, 3, 4, 5, and 6 days. The bottom row shows the embryo at 7, 8, 9, 10, 11, and 12 days. The drawings illustrate the progression of the embryo from a single cell to a fully formed chick with a beak and legs.
